Germany | Wolfsburg | The Time House of the Automobile City

Project:
Time House of the Automobile City
Location:
Wolfsburg, Germany
Product:
OKATECH with Omega 1520
Square metres:
300 m²
Architect:
Henn Architekten + Ingenieure,
München
Completion:
1999

The large museum roof as a transition between a country environment and the entrance to the city. It spans a composition of structural bodies that have been reduced in their form. The entrance and the foyer offer a transparent zone of adaptation; the interior can be seen during daylight, and radiates outwards during darkness. The external conclusion of this complex,

multilayered construction is formed by a roof covering made of double-pane glass with integrated light-guiding profiles. In the gallery region and in marginal regions too, these slats guarantee the architecturally deliberate suspension of the symmetry of the roof mirror through different heights and adjustments.

We take architectural glass a step ahead.
